Deleted Cells

Trading procedure	Auction
Auction procedure	Single clearing price, which means a Trade maximum at the price of the buyer's Order or no Trade and a Trade minimum at the price of the seller's Order or no Trade.
Auction algorithm	<p>Steps of the Auction algorithm:</p> <ol style="list-style-type: none"> 1. Possible Contracts are determined based on the possibilities of the inserted Orders' attributes. 2. Contracts are sorted in order to maximize traded volume and social welfare. 3. For the given Contract buy Orders are sorted in descending order and sell Orders are sorted in ascending order based on the price. 4. The intersection (Marshallian Cross) of the buyers' and sellers' price-volume functions determines the traded volume for the Contract. The price is set by the last accepted buy Order. Pro-rata is applied in case of Orders with equal price on the same side of the Order Book.
Clearing and Settlement	Set by the Clearing and Settlement Regulation of HUPX GO Rules and Regulations.
